Hint

You are given a **0-indexed** 1-dimensional (1D) integer array `original`, and two integers, `m` and `n`. You are tasked with creating a 2-dimensional (2D) array with `m` rows and `n` columns using **all** the elements from `original`.

The elements from indices `0` to `n - 1` (**inclusive**) of `original` should form the first row of the constructed 2D array, the elements from indices `n` to `2 * n - 1` (**inclusive**) should form the second row of the constructed 2D array, and so on.

Return an `m x n` 2D array constructed according to the above procedure, or an empty 2D array if it is impossible.

Example 1:

Input: `original = [1,2,3,4], m = 2, n = 2`

Output: `[[1,2],[3,4]]`

Explanation: The constructed 2D array should contain 2 rows and 2 columns.

The first group of $n=2$ elements in original, `[1,2]`, becomes the first row in the constructed 2D array.

The second group of $n=2$ elements in original, `[3,4]`, becomes the second row in the constructed 2D array.

Return an $m \times n$ 2D array constructed according to the above procedure, or an empty 2D array if it is impossible.

Example:- Original = $\{1, 2, 3, 4\}$

1	2
3	4

$$m = 2$$

$$n = 2$$

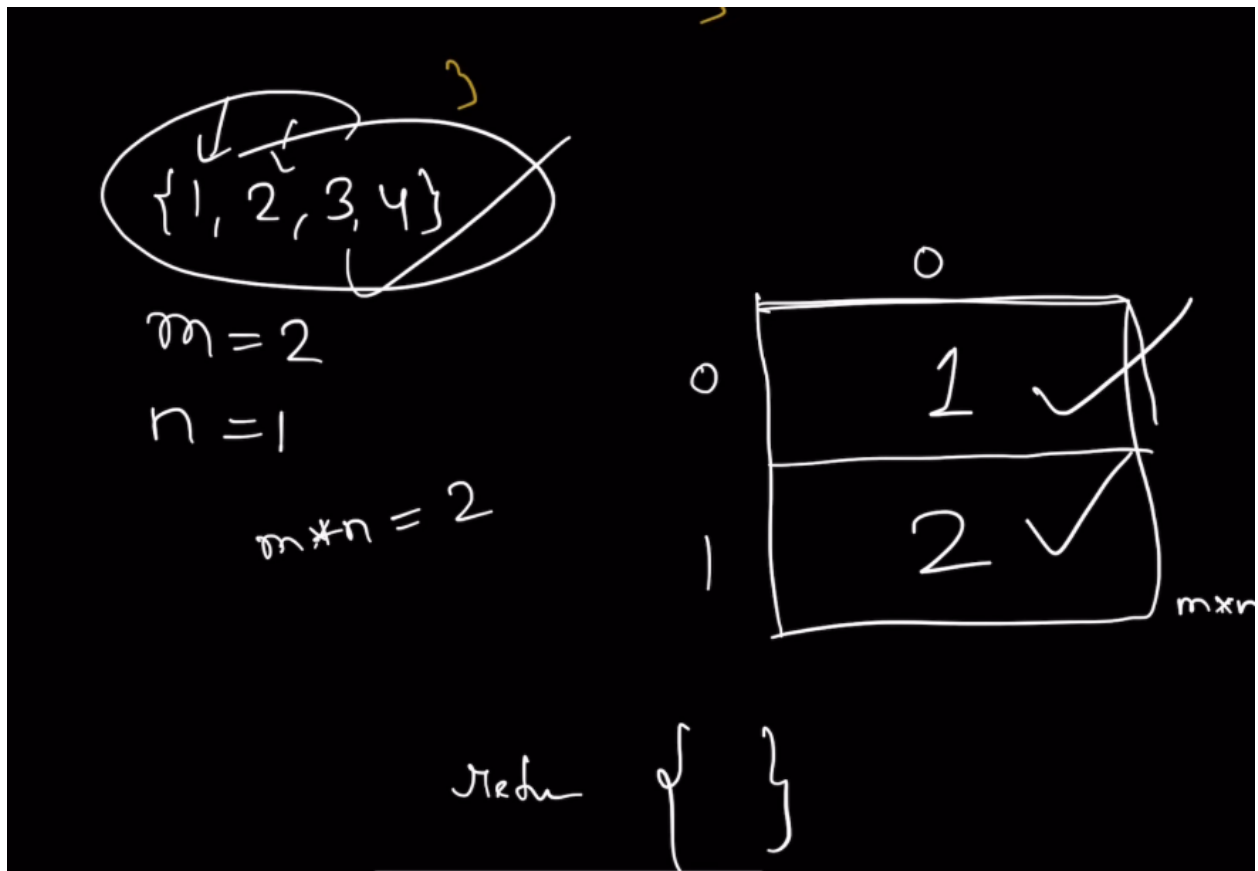

Output :- $\begin{bmatrix} [1, 2], \\ [3, 4] \end{bmatrix}_{2 \times 2}$

	0	1
0	1	2
1	3	4

$$m = 2$$

$$n = 1$$

	0
0	
1	

here we have 4 element and only 2 array to fill
 then just return {} empty array

Approach 2

“Whenever you are asked to map
a 1-D array to 2-D array”

$$i / \text{col} = \text{row}$$

$$i \% \text{col} = \text{col}$$

$\{ \overset{0}{\textcircled{1}}, \overset{1}{2}, \overset{2}{3}, \overset{3}{4} \}$

$i = 0$
 $row = i / n = 0 / 2 = 0$
 $col = i / n = 0 / 2 = 0$

	0	1
0	1	
1		

$m = 2$
 $n = 2$

$\{ \overset{0}{\textcircled{1}}, \overset{1}{\textcircled{2}}, \overset{2}{3}, \overset{3}{4} \}$

$i = 1$
 $row = i / n = 1 / 2 = 0$
 $col = i / n = 1 / 2 = 1$

	0	1
0	1	2
1		

$m = 2$
 $n = 2$

```

for (int i = 0 ; i < original.size() ; i++) {
    row = i/n ;
    col = i/n ;
    result [row] [col] = orig[i] ;
}

```

T.C $\rightarrow O(m \times n)$

```

class Solution {
public:
    vector<vector<int>> construct2DArray(vector<int>& original, int m, int n) {
        int idx = 0;
        vector<vector<int>> arr(m, vector<int> (n));

        if(original.size() != (m*n)){
            return {};
        }
        for(int i=0;i<original.size();i++){
            int row = i/n;
            int col = i%n;
            arr[row][col] = original[i];
        }
        return arr;
    }
};

```
